

Securing the OpenHDS

Securing the OpenHDS can be done using some Web Forms. The tutorial will demonstrate how to create new roles and assign them to new Users.

To create new Roles can be done by proceeding to CONFIGURATION -> Role Management

The screenshot shows the OpenHDS web interface. On the left is a sidebar with the OpenHDS logo and a navigation menu. The menu items are: English, Welcome admin, [Logout](#), HOME, GETTING STARTED, BASELINE, UPDATE, AMENDMENTS, REPORTS, UTILITY ROUTINES, CONFIGURATION, Codes and Parameters, Database, Location Levels, Role Management, User Management, and Whitelist Management. The 'CONFIGURATION' item is highlighted. On the right is the main content area. At the top, there are two tabs: 'Listing' and 'Form View'. Below the tabs, the breadcrumb 'Configuration > Role Create' is shown. The main heading is 'Create Role'. There are two input fields: 'Name:' and 'Description:'. Below these is a section for 'Privileges:' with a list of checkboxes: CREATE_ENTITY, ACCESS_REPORTS, ACCESS_UTILITY_ROUTINES, ACCESS_CONFIGURATION, EDIT_ENTITY, DELETE_ENTITY, VIEW_ENTITY, CREATE_USER, DELETE_USER, ACCESS_BASELINE, ACCESS_UPDATE, and ACCESS_AMENDMENT_FORMS. At the bottom right of the form is a 'Create' button.

Several roles have already been created, which can be seen in the 'Listing' tab. New roles can be created by specifying a name, description, and checking the associated amount of Privileges allowed with the role. Users can be created and Roles can be associated with them.

To create a new User, proceed to CONFIGURATION -> User Management

Confirm Password:

Roles:

☐ ADMINISTRATOR

☐ DATA CLERK

☐ DATA MANAGER

☐ TEST USER

Modifying existing users can be done by pressing the 'Listing' tab and editing each User (such as the default admin User). New Roles that were created will be displayed here and can be associated to the defined User. Once the User is created, you will need to log out and then log back in for the changes to take effect.
