OpenHDS Codes and Parameters Configuration

Codes and parameters that are common for project sites can be configured using a Web Form. This Web Form allows a project site to define how the demographic data is to be represented, certain validation rules, and how the user interface will behave. This tutorial will explain how these settings can be modified.

The Web Form can be accessed under CONFIGURATION -> Codes and Parameters

Configure Codes and Parameters

Unknown Identifier:	UNK
Not Applicable:	NA
Male:	M
Female:	F
Yes:	Y
No:	N
Birth:	BIR
Death:	DTH
